Since the establishing of the Tyva Republic, there is still no official comprehensive encyclopedia in Tyva language.

That makes our work extremely hard and we have no encyclopedic experience in Tyva language.

Before coronavirus Covid-19

Mobile devices vs computers in Tyva.

- extremely high amount of mobile devices – regional specification;
- no needed to have personal computers for studying and working;
- online skills and habits are not improved;
- online activities less interesting than offline;
- not enough online movements;
- less information in Tyvan language online.

**01.11.2017. Tyva Language Day.
Before we could meet offline.**

The Covid-19 began to spread

People get more personal computers, thus we can engage more wikipedians.

- working and studying at home makes online users more plodding;
- we started to participate in online movements;
